If you have been searching for an alternative to chlorinated solvents, there is no need to search further. This product is a blend of natural and synthetic compounds that combine to produce a remarkably effective product. Natural citrus extracts produce incredible solvency to cut through the most difficult deposits. Carefully selected solvents, chosen for their low toxicity and lack of effect of atmospheric ozone complete this newest development in industrial solvents.

This product is one of the few products that can remove the strongest deposits without sacrificing worker's safety. The light, fresh scent makes even the most tedious and unpleasant task more bearable.

DIRECTIONS FOR USE

This product was developed to safely remove grease, oil and tar from a variety of surfaces. It works quickly on metal parts without causing corrosive under normal conditions. Although this product is safe on most plastics and painted surfaces, be sure to test before using.

DIP TANK CLEANING: Dip parts to be cleaned into solvent. Allow to soak until grease and grime are loosened. Remove and allow to dry. To reduce drying time, use a compressed air gun.

SPRAY CLEANING: Spray solvent directly on parts using air gun or sprayer. Be certain to cover entire surface to be cleaned. Allow solvent to work for 5 to 10 minutes. Parts can be wiped dry or allowed to air dry. This product is ideal for use in a recirculating parts washer.
