

CAR WASH POWDERED DETERGENT

DIRECTIONS

For the best results, wash vehicles in a protected or shady area – not in the hot sun. Use 2 to 6 ounces of detergent per gallon of warm or hot water. Spray, mop or sponge the cleaner solution onto wet vehicle and allow to act for several minutes. Rinse thoroughly with clean water. To avoid streaking, always start washing the lower soiled surfaces and move to the upper surfaces.

This powdered car wash detergent may also be used in automatic washers. Use 1 to 3 ounces per gallon of water in the wash tank, or follow the instructions provided by the equipment manufacturer.
